How to use my Poker Variance

Calculator?

This section will explain how the calculator works and what the numbers and charts mean.

Enter the data Settings Hop over to the Variance Calculator page and enter your win rate, standard deviation, and the number of hands you want to simulate. You can ignore the field observed win rate, we'll get to its purpose later. Once you have entered the data, hit Calculate and let the Calculator do its magic.

Twenty samples

Variance Calculator Samples The first thing the Variance Calculator does is to run 20 samples over the number of hands, win rate and standard deviation specified. It'll also calculate the expected winnings over the number of hands. This number will appear as a rather boring straight and black line in the graph. Thirdly the calculator displays the 70% and 95% confidence intervals as light and dark green curves. What you need to know about them is that at any given time your winnings will be within these intervals with a probability of 70% and 95% respectively. They basically show, how much variance you

should expect to see.

Variance in numbers

Below the first chart, the Variance

Calculator compiles a neat list of additional information:

EV : win rate entered

above

: win rate entered above Standard deviation : standard deviation entered above

:

standard deviation entered above Hands : number of hands entered above

: number of

hands entered above Expected winnings : estimated winnings over the simulated amount of hands

: estimated winnings over the simulated amount of hands Standard deviation after

X hands : This number shows how much your actual results will differ from the expected results on average. The first number shows the absolute value and the second translates this number into BB/100, showing the impact on your win rate.

: This number shows how

much your actual results will differ from the expected results on average. The first number shows the absolute value and the second translates this number into BB/100, showing the impact on your win rate. 70% confidence interval : Your actual results over the simulated amount of hands will be within this interval 70% of the time. The first interval shows absolute numbers and the second translates those into BB/100, showing the 70% confidence interval for your win rate.

: Your actual results over the simulated

amount of hands will be within this interval 70% of the time. The first interval shows absolute numbers and the second translates those into BB/100, showing the 70% confidence interval for your win rate. 95% confidence interval : Same as the above with 95% certainty. Meaning: 19 out of 20 times your actual winnings will be within this interval.

: Same as the above with 95% certainty. Meaning: 19 out of 20 times your actual winnings will be within this interval. Probability of loss after X hands : the probability that you will experience negative winnings (meaning: losses) over the number of hands.

: the probability that you will experience negative winnings (meaning:

losses) over the number of hands. Probability of running at or above observed win rate ... : If you entered an observed win rate, this number will show you the probability that you will experience a run at or above this win rate over the number of hands.

: If you

entered an observed win rate, this number will show you the probability that you will experience a run at or above this win rate over the number of hands. Probability of running below observed win rate ... : Same as above – the probability that you will experience a run below the observed win rate over the number of hands.

: Same as above

– the probability that you will experience a run below the observed win rate over the number of hands. Minimum bankroll for less than 5% risk of ruin: the bankroll needed to have a risk of ruin of less than 5%

Detailed sample with downswing

Variance Calculator

Downswing Samples

This chart simulates a single run over 100 thousand up to 10 million

hands with the win rate and standard deviation entered above. You can choose how many hands to simulate by moving the slider.

Apart from showing a single sample, this graph

also shows some insightful information about downswings. The red area shows for any given point, how much the sample is currently away from its previous peak, meaning it tracks downswings. This chart uses two vertical axes. While the sample winnings have their scale on the right axis, the downswing tracker has its scale on the left axis. In this example, the simulated player ended up with winnings over 25,000 big blinds after 2.5 million hands but had to deal with a nasty downswing of almost 10,000 big blinds between hand 1.2 million and hand 2 million.

Downswings in numbers

The last section of

the Variance Calculator sheds some more light on potential downswings. Therefore 100 million hands are simulated and all downswings over this simulation are tracked. The first table shows the extent of the downswings. It shows how often the simulated player was stuck in a downswing of at least X big blinds. For example (1000+ BB – 31.77%) means the player was in the middle of a downswing of at least 1,000 big blinds 31.77 percent of the time.

The second table shows how long downswings last on average. For

example (50000+ Hands – 15.81%) means the simulated player was in a downswing over at least 50,000 hands 15.81 percent of the time. For the purpose of these calculations, a downswing is defined as any period where the current total winnings are below the maximum previous total winnings. Meaning, that by this definition a downswing is not over until the player has fully recovered his losses.

In general, these simulations

underestimate the extent of downswings, but the numbers should still give you a decent idea of the vastness of downswings you should expect.

Should you have any questions,

encounter any errors or have ideas for improvements, please let me know.

Após um bloqueio de quatro dias no Hospital Al Awda, importante centro médico do norte da Faixa e região metropolitana de Gaza (norte), o Exército israelense ordenou que pacientes e equipe fossem retirados na quarta-feira para depois invadirem os arredores. Enquanto a maioria das cerca de 150 pessoas que estavam no Hospital Al Awda foram capazes para evacuar, 30 pacientes em estado crítico e seus companheiros ficaram atrás do hospital.

Os militares israelenses se recusaram a comentar sobre suas operações em torno de Al Awda, que está na área Tal al-Zaatar no norte da Gaza. Israel retirou grande parte do Norte mais cedo neste ano mas recentemente voltou para algumas áreas e lutou contra o Hamas por tentar reconstituir as forças ali existentes

O diretor interino do hospital, Dr. Mohammad Salha disse que havia dito às forças israelenses para não mover alguns pacientes críticos sem ambulâncias e afirmou ter permanecido lá junto com algumas equipes médicas a fim de garantir uma evacuação segura dos doentes

"Eles estão esmagando tudo, destruindo as portas", disse o Dr. Salha. "Eles checam cada centímetro do hospital" acrescentou ele em uma mensagem de voz vinda da manhã desta quinta-feira no interior dos hospitais".

Naji Ziadeh, membro da equipe administrativa do hospital disse que aqueles no Hospital foram "assassinado por quatro dias inteiros durante os quais vivemos um horror indescritível". Ele afirmou em uma entrevista telefônica de onde havia avançado o tanque para a entrada e as tropas usaram alto-falante.

As forças israelenses começaram então a escoltar pacientes e funcionários para fora do hospital, procurando-os um por um. Eles foram levados ao armazém de Gaza pedindo que se mudassem em direção à cidade da Faixa...

Ziadeh disse que ele "derramou lágrimas de angústia" enquanto evacuava o hospital, onde trabalhava desde a guerra.

Aqueles que tinham ficado presos dentro do hospital durante o bloqueio, com pouco combustível e sem água limpa incluíam dois recém-nascidos de suas mães. Eles os entregaram por cesarianas; acrescentou ainda: membros da equipe em contato haviam sido levados para a cidade onde estavam procurando abrigo na Faixa...

As condições terríveis no hospital fazem parte de um padrão que se tem desenrolado repetidamente em toda a Gaza ao longo dos mais sete meses da guerra. Israel invadiu vários hospitais depois acusando o Hamas, grupo armado e líder do ataque contra os israelenses sulistas na sexta-feira (7) por usá-los para fins militares? afirmava ter sido negado pelo Hamas aos administradores hospitalares

Como muitas instalações médicas, Al Awda sofreu repetidos ataques. Em novembro de 2013, Médicos Sem Fronteiras disse que três médicos foram mortos em uma greve no hospital e dois membros da equipe morreram na noite passada (horário local).

O hospital também enfrentou um cerco de quase duas semanas em dezembro, durante o qual vários trabalhadores médicos no prédio foram baleados do lado externo. Os militares israelenses assumiram então controle sobre os hospitais e despojaram as pessoas para interrogatório", disse a MSF

O diretor do hospital, Dr. Ahmed Muhanna foi um dos que foram levados sob custódia israelense e seu paradeiro permanece desconhecido de acordo com a ActionAid outra organização não governamental responsável pelo apoio ao Hospital Israelense Aameera Harouda contribuiu com reportagens de Doha, Qatar.
